Title: Domestic Residential Home Equity Lending Data.

OMB Control Number: To be assigned by OMB.

Description: Comprehensive home equity line of credit data is vital to assessing and monitoring credit quality and loss mitigation activities in the residential mortgage market and the federal banking system. This data is important and necessary to support supervisory activities to ensure the safety and soundness of the federal banking system. Where the respondent is both the servicer and originator of a home equity loan or line of credit, the Home Equity Residential Lending Data collection would include origination data and only servicing data where the respondent services for others. Detailed loan level data would be collected monthly and portfolio level data collected quarterly. All data collected would be based on standard data and definitions.

The reported loan level data items would include: loan number; property information; loan, line, and appraisal amounts; loan documentation information; loan-to-values and debt-to-income-ratios; non-personally identifiable information borrower information; bankruptcy and foreclosure status; and other detailed loan information. The reported portfolio level data would include: total managed Home Equity portfolio (lines and loans), total securitized Home Equity portfolio, and other portfolio level information.

Also, in order to match senior and junior lien residential mortgages on the same collateral, the OCC would collect additional information (add data elements) on the residential mortgage loans reported in Domestic First Lien Residential Mortgage and the Domestic Residential Home Equity Lending datasets. This data would include: property and mailing

address, census tract, liquidation status, and original lien position. By matching the senior and junior liens by property ID, the OCC would gain better insight into the level of risk of both credit types, for example, current loans secured by junior liens behind past due loans secured by first liens.
